

MARCH 2017 NEWSLETTER

WIRELESS TELEPHONE ENTRY SYSTEMS

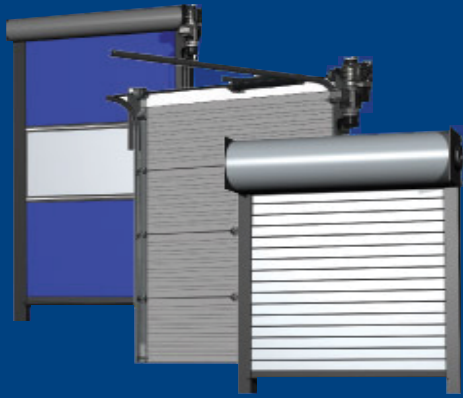

The **GSM Wireless Telephone Entry System** does not require a direct phone line and allows you to grant access directly from your mobile device. Open your gate and speak to your visitors from anywhere in the world.

A SIM card (not provided) is used to program, activate and communicate with your cell phone. In certain aspects a SIM card can be more cost effective than traditional phone lines. Contact your cell phone provider for pricing and monthly talk/text rates.

Features:

- Calls up to 3 numbers in sequence
- Caller ID features for access up to 100 authorized callers
- Keypad stores up to 1,200 access codes

MARCH 2017 NEWSLETTER

The **Multi-Resident GSM Wireless Telephone Entry System** model calls up to 500 apartments wirelessly using a SIM card (not provided). The digital display allows users to scroll through a directory and dial by apartment number.

The system is programmable via SMS text, a PC or at the unit using the keypad.

Features:

- Up to 3 numbers can be called in sequence per apartment
- Keypad can be used as a 6-digit access control

The **Predator WIFI Wireless Telephone Entry System** uses existing WIFI to activate and communicate with your gate. Access the app on your mobile device to communicate with your guest through a video call. The mobile app allows you to record video and take pictures through the duration of the video call.

Your mobile device does not have to be connected to the local WIFI to engage in a video call, allowing you to communicate with your gate anywhere in the world (with access to cellular data or WIFI).

Features:

- Calls up to 4 devices at the same time
- 200m WIFI range with directional antenna (range depends on application and existing WIFI conditions)
- Keypad stores up to 1,200 access codes
